### Objectives:

- Understanding how to implement qualities to improve your own professionalism
- To identify practical learning skills and concepts that will promote students' academic success.
- To encourage students to explore the connection between study and life enrichment, lifelong learning, and civic responsibility as well.
- **Proficiency in Verbal Communication:** Most of the young graduates lack the confidence and fluency while interacting verbally. Coming either from rural or sub-urban background, many students hold good academic record and industrial skills but lack behind while expressing themselves.
- **Acquirement of Knowledge in a Particular Field:** Seminars and workshops provide a chance to interact with experts from the specific field. Discussing about the relevant topics of the particular subject, students tend to learn about the latest information and new skills related to the concerned subject.
- **Growth in Networking:** In seminars and workshops the students and faculties from different educational institution join to take part. Meeting new people can help the students in getting guidance and solutions related to common problems. Making new friends can not only encourage new ways of thinking and learning but might open up new opportunities as well.
- **Encouragement and Motivation:** Talking and learning about a new topic will encourage the students to explore new areas relevant to the topic. Students will feel motivated to research and learn new things. With proper guidance from teachers and experts, students feel motivated to publish their own **research journals**, contributing significantly to the education sector.
- **A Different Environment than Classroom:** In a learning environment different and unique from classrooms, students learn more effectively and efficiently. Far from the textbooks and academic syllabuses, students research and learn on their own which boost their confidence, performance, and productivity.

**REPORT ON CLASSROOM SEMINAR**

Department of Botany organized classroom Seminars for the Post Graduation students of Botany in the department. For the students of post-graduation seminars are designed in the seminar hall where they present their one seminar with the help of Power point presentation and one on black board as well. The programs are designed so that it enhances the ability of speaking as well as to face the audience or listeners. All the students were excited for seminars with some fear and doubts. The students are taught how to organize a better seminar and the points and way by which we can make our presentation effective by the faculties of the department. They taught the role of synopsis and how can we prepare our synopsis for each and every questions. The students learnt how to prepare PPT and how to presents their topics in between the viewer. At every presentation the 15 minutes were allotted to the each student to explain their topics and after it 5 minutes time for the question and answer session, where the others can raise their queries regarding the topic. And the presenters quenched their thirst by the means of their abilities. If the Presenter were not satisfying the students then the teachers explain the query and provide solution for the same.

In these classroom seminars students learn to develop skills to identify problems and handle the problems as well. There were 16 students of M.Sc. Previous and 12 students of M.Sc. Final participated in these classroom seminars with around 30-40 students of graduation also joined as audience and benefitted by this program. We felt immense pleasure that more than 70% students upgrade their knowledge regarding the subjects and also improved their practical skills.

Really the Seminar was a great success.

### The Egyptian vulture – a species under threat

The Egyptian vulture (*Neophron percnopterus*) is recognized as globally 'Endangered' (EN). It was uplisted in 2007 due to rapid population declines in most of its range, especially across Europe, Africa and India. It is listed in the EU Birds Directive (Annex I), the Bern Convention (Appendix II), the CMS (Appendix II), and the CITES (Appendix II).

### Range and focus of Action Plan

The Egyptian vulture is a long distance migrant, and is found throughout Eurasia and Africa. The population that is targeted by this Action Plan breeds across the Balkans, Central Asia and Caucasian region, and migrates to wintering grounds that largely overlap with the range of the resident population of the same species in the Middle East, Central and East Africa. The major threats along the flyway that are addressed by this plan are poisoning, electrocution and collisions with energy infrastructure, and direct persecution. Mostly, the drivers pushing the different stakeholders' activities that threaten the species are economic; most (if not all) stakeholder groups lacked awareness of the affect of their activities have on the conservation status of the Egyptian vultures. The Action Plan seeks to consider the following needs: long-term research and monitoring; designation of protected areas (non-EU); building conservation capacity; improving exchange of information; coordination of NGO driven initiatives; partnerships with industry (e.g. energy, agriculture); and improving awareness-raising and publicity.

### Framework for action

The overall long-term goal of the Action Plan is to improve the conservation status of the Egyptian vulture, leading initially to its downlisting to Vulnerable and eventually achieving a

favorable conservation status of the species across FAP range. In shorter term, by 2026 the EVFAP seeks to halt the downward trends in the declining meta-populations while maintaining stable or increasing trends for the healthy ones. More specifically, through 67 actions the EVFAP aims to significantly reduce Egyptian vulture mortality in the FAP range due to poisoning, illegal killing, electrocution and collision with energy infrastructures; enhance the size and productivity of breeding populations; and ensure endorsement and effective implementation of the the EVFAP by all Range States.

#### Delivery and coordination

It is envisaged that the EVFAP will be implemented over a 10-year period (2017 – 2026). It should be reviewed every five years (with the first review in 2021), and updated every 10 years (first update due in 2026). An emergency review will be undertaken if there is a sudden major change liable to affect one of the populations.
