REPORT

On the World Photography Day Department of Botany, Seth Gyaniram Bansidhar Podar College organized a Competition on "World Photography Day" on 19 August 2022. In the program total 31 students participated and learn about the concept of Photography. The program was started with the inaugural speech by Dr. Satyendra Singh, Principal Seth Gyaniram Bansidhar Podar College, in his speech he concluded skills needed in Photography and use of Photography. After this Dr. Ravindra Goswami, Head Department of Botany gave brief introduction about photography. In his lecture he explained how can capture an ideal photography. Photography is the art of capturing light with a camera, usually via a digital sensor or film, to create an image. With the right camera equipment, you can even photograph wavelengths of light invisible to the human eye, including UV, infrared, and radio.

In second session students click an captured the natural beauties with the help of their mobile and after that final selection and judgement of the clicks done by the judges. And the first prize given to Mr. Anup Kumawat, second position was taken by Km. Krishna while the third position attained by Ms. Maniisha.

In the list of guest Dr. Satyendra Singh, Dr. Vinod Saini was present with Ms. Shyama Didwania and Ms. Suman Saini. The program ended with the vote of thanks given by Ms. Shyama Didwania, Department of Botany.

COURSE DESCRIPTION:

The first permanent photograph was captured in 1826 (some sources say 1827) by Joseph Nicéphore Niépce in France. It shows the roof of a building lit by the sun. You can see it reproduced below:

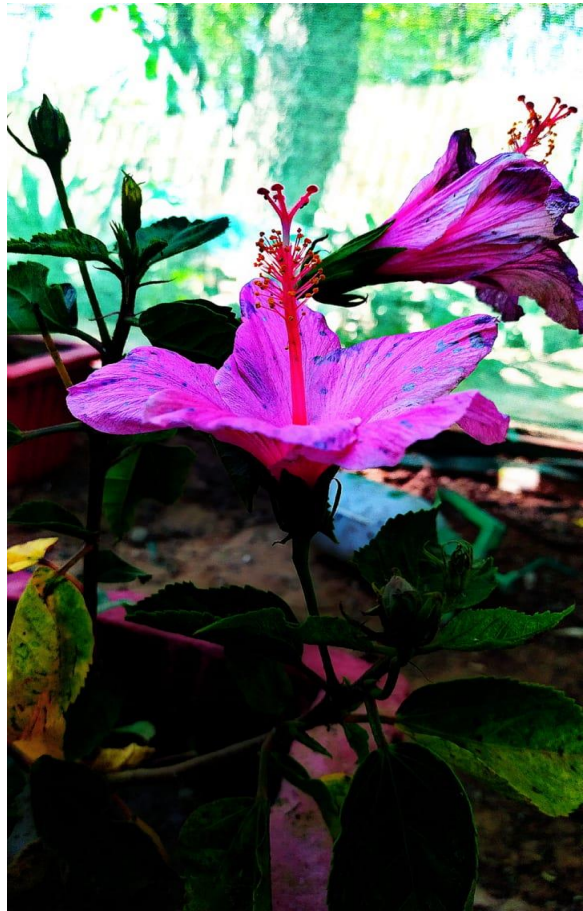

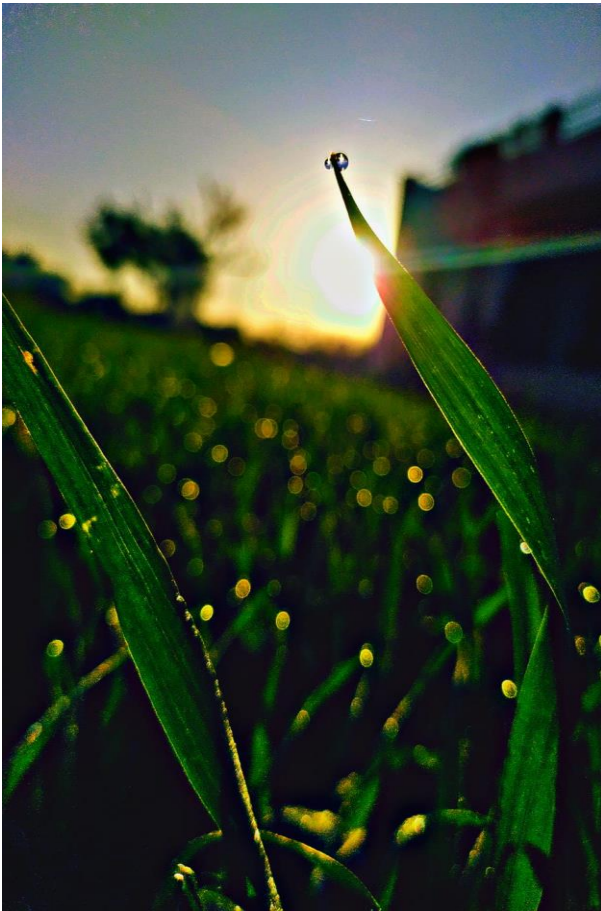

Camera If you buy a dedicated camera (rather than a phone), pick one with interchangeable lenses so that you can try out different types of photography more easily. Read reviews, but don't obsess over them, because everything available today is pretty much equally good as its competition. Find a nice deal and move on.

Lenses This is where it counts. For everyday photography, start with a standard zoom lens like a 24-70mm or 18-55mm. For portrait photography, pick a prime lens (one that doesn't zoom) at 35mm, 50mm, or 85mm. For sports, go with a telephoto lens. For macro photography, get a dedicated macro lens. And so on. Lenses matter more than any other piece of equipment because they determine what photos you can take in the first place.

Post-processing software One way or another, you need to edit your photos. The software that comes with your computer probably won't cut it in the long run. I'm not really a pro-Adobe person, but at the end of the day, Photoshop and Lightroom are still the standards for photo editing. For now, it's $10/month for both of them. An open-source Lightroom alternative called Darktable is an option if you're on a budget. Whatever you pick, stick with it for a while, and you'll learn it really well.
